TEST REPORT

Report Reference No.: AST2003205052

Applicant: Mezorrison Health Science & Technology (shenzhen)Co., Ltd

No.12 Yuhe Road, Shiyan Town, Baoan District, Shenzhen Address:

Sample Name: Respirator filter

MZC-KZ-06 Model:

Trademark:

美莊臣 MEZORISON

Standard:

EN 149:2001+A1:2009

Test Period:

Mar.12, 2020 to Mar.19, 2020.

Test Result:

Please refer to next pages

Conclusion:

Based on the performed tests on submitted samples, the results comply with the R 2016/425 (Regulation on Personal Protective Equipment) and its subsequent amendments

Tested By:_

2020-03-19

2020-03-19

General remarks:	
"(see remark #)" refers to a remark appended to the report. "(see appended table)" refers to a table appended to the report. Throughout this report a comma is used as the decimal separator. The test results presented in this report relate only to the object tested. This report shall not be reproduced except in full without the written approval of the testing laboratory. Unil otherwise specified, all tests are done under normal ambient condition 25°C±10°C, Max RH: 75% and air pressure of 860 mbar to 1060 mbar.	Atached with: Atachment - A. Photo Documentation

The test samples were pre-production samples without serial numbers. This report shall not be reproduced except in full without the written approval of the testing laboratory.

This report covers MZC-KZ-06.

The test result presented in this report relate only to the object tested. The samples tested comply with the requirements of this standard.

EN 149:2001+A1:2009			
Clause	Requirement-Test	Result-Remark	Verdict
7.17.3	Penetration of filter material All types (valved and valveless) of particle filtering half masks claimed to meet the dogging requirement shall also meet the requirements given in 7.9.2, for the Penetration test according to EN 13274-7, after the dogging treatment.		N/A
7.18	Demountable parts		-
	All demountable parts (if fitted) shall be readily connected and secured, where possible by hand.	1 10 10	N/A
8	Testing	The same of the sa	
8.1	General		-
	If no special measuring devices and methods are specified, commonly used devices and methods shall be used.		Р
8.2	Visual inspection		-
	The visual inspection is carried out where appropriate by the test house prior to laboratory or practical performance tests.		Р
8.3	Conditioning		-
8.3.1	Simulated wearing treatment		*
	Conditioning by simulated wearing treatment shall be carried out by the following process.	W 10	Р
832	Temperature conditioning		-
	Expose the particle filtering half masks to the following thermal cycle: a) for 24 h to a dry atmosphere of (70 ± 3) °C; b) for 24 h to a temperature of (-30 ± 3) °C;		Р
8.3.3	Mechanical strength	102 10	
100	Conditioning shall be done in accordance with EN 143.		Р
8.3.4	Flow conditioning	110	1
	A total of 3 valved particle filtering half masks shall be tested, one as received and two temperature conditioned in accordance with 8.3.2.	in accordance with 8.3.2.	Р
8.4	Practical performance	(n '4 ()	-
8.4.1	General		-
	A total of 2 particle filtering half masks shall be tested: both as received.		Р
8.4.2	Walking test		-

Report No.: AST2003205052 Page 8 of 20

EN 149:2001+A1:2009			
Clause	Requirement-Test	Result-Remark	Verdic
	The subjects wearing normal working clothes and wearing the particle filtering half mask shall walk at a regular rate of 6 km/h on a level course. The test shall be continuous, without removal of the particle filtering half mask, for a period of 10 min.		Р
8.4.3	Work simulation test		-
	The particle filtering half mask shall be tested under conditions which can be expected during normal use. During this test the following activities shall be carried out in simulation of the practical use of the particle filtering half mask. The test shall be completed within a total working time of 20 min.	within a total working time of 20 min	Р
8.5	Leakage		-
8.5.1	General test procedure		
8.5.1.1	Total inward leakage		-
	A total of 10 test specimens shall be tested: 5 as received and 5 after temperature conditioning in accordance with 8.3.2.	in accordance with 8.3.2.	Р
8.5.1.2	Test equipment		-
	The test atmosphere shall preferably enter the top of the enclosure through a flow distributor, and be directed downwards over the head of the test subject at a minimum flow rate of 0,12 mls. The concentration of the test agent inside the effective working volume shall be checked to be homogeneous. The flow rate should be measured close to the subject's head.		P
8.5.1.3	Test procedure		-
	Ask the test subjects to read the manufacturer's fitting information and if more than one size of particle filtering half mask is manufactured, ask the test subject to select the size deemed by him to be the most appropriate. If necessary the test supervisor shall show the test subjects how to fit the particle filtering half mask correctly in accordance with the filtho information.		P
852	Method		-
8.5.2.1	Principle		

Report No.: AST2003205052 Page 9 of 20

Clause	Requirement-Test	Result-Remark	Verdic
. "	The subject wearing the particle filtering half mask under test walks on a treadmill over which is an enclosure		Р
8.5.2.2	Test equipment		-
8.5.2.2.1	Aerosol generator		-
	The NaCl aerosol shall be generated from a 2 % solution of reagent grade NaCl in distilled water. An atomizer equivalent to the type described should be used. This requires an air flow rate of 100 l/min at a pressure of 7 bar. The atomizer and its housing shall be fitted into a duct through which a constant flow of air is maintained. It may be necessary to heat or dehumidify the air in order to obtain complete drying of the aerosol particles.		Р
8.5.2.2.2	Test agent		-
	The mean NaCl concentration within the enclosure shall be (8 ± 4) mg/m3 and the variation throughout the effective working volume shall be not more than 10 %. The particle size distribution shall be 0,02 µm		Р
19	to 2 µm equivalent aerodynamic diameter with a mass median diameter of 0,6 µm.		- 12
8.5.2.2.3	Flame photometer		-
	A flame photometer shall be used to measure the concentration of NaCI inside the particle filtering half mask. Essential performance characteristics for a suitable instrument are: a) It should be a flame photometer specifically designed for the direct analysis of NaCI aerosol; b) It should be capable of measuring concentrations of NaCI aerosol between 15 mg/m3 and 5 ng/m3; c) The btal aerosol sample required by the photometer should not be greater than 15 limit; d) The response time of the photometer, excluding the sampling system, should not be greater than 500 ms; e) It is necessary to reduce the response to other elements, particularly carbon, the concentration of which will vary during the breathing cycle. This will be achieved by ensuring that the band passawith of the interference fifter is no greater than 3 rm and that all necessary side-band fifters are included.	Comply with the requirements	P

Report No.: AST2003205052 Page 10 of 20

EN 149:2001+A1:2009			
Clause	Requirement-Test	Result-Remark	Verdic
8.52.2.4	Sample selector		
	A system is required which will switch the sample to the photometer only during the inhalation phase of the respiratory cycle. During the enhalation phase clean air shall be fed to the photometer. The essential elements of such a system are: a) An electrically operated valve with a response time of the order of 100 ms. The valve should have the minimum possible dead space compatible with straight-through, unrestricted flow when open; b) A pressure sensor which is capable of detecting a minimum pressure change of approx 0,05 mbar and which can be connected to a probe inserted in the carly of the particle filtering half mask. The sensor shall have an adjustable threshold and be capable of differential signaling when the treshold is crossed in either direction. The sensor shall work reliably when subjected to the accelerations produced by the head movements of the subject; c) An interfacing system to actuate the valve in response to a signal from the pressure sensor;		P
	 d) timing device to record the proportion of the total respiratory cycle during which sampling took place. 		1
8.5.2.2.5	Sampling probe		
	The probe shall be fitted securely in an airtight manner to the particle filtering half mask as near as possible to the centre line of the particle filtering half mask. A multiple hole sampling probe is strongly recommended.		Р
8.5.2.2.6	Sample pump		-
	If no pump is incorporated into the photometer an adjustable flow pump is used to withdraw an air sample from the particle filtering half mask under test. This pump is so adjusted as to withdraw a constant flow of 1 lithin from the sample probe. Dependent on the type of photometer it may be necessary to dikite the sample with clean air.		P
8.5.2.2.7	Sampling of enclosure concentration		

Report No.: AST2003205052 Page 11 of 20

	EN 149:2001+A1:2009		
Clause	Requirement-Test	Result-Remark	Verdic
	The enclosure aerosol concentration is monitored during the tests using a separate sampling system, to avoid contamination of the particle filtering half mask sampling lines. It is preferable to use a separate fame photometer for his purpose.		Р
8.5.2.2.8	Pressure detection probe		
	A second probe is fitted near to the sample probe and is connected to the pressure sensor.		Р
8.5.2.3	Expression of results		-
	The leakage P shall be calculated from measurements made over the last 100 s of each of the exercise periods to avoid carry over of results from one exercise to the other. $P(%) = \frac{C_2}{C_1} \cdot \left(\frac{f(N^{-1}EX)}{f(N)}\right) \cdot 100$		P
	where C1 is the challenge concentration C2 is the measured mean concentration in the breathing zone of the test subject IN is the total duration of inhalation tEX is the total duration of exhalation		
8.6	Flammability		-
٠, "	A total of four particle filtering half masks shall be tested: two in the state as received and two after temperature conditioning in accordance with 8.3.2.	in accordance with 8.3.2.	Р
8.7	Carbon dioxide content of the inhalation air	-	
i (ni	A total of 3 particle filtering half masks shall be tested: all 3 as received.		Р
8.8	Strength of attachment of exhalation valve housing		
	A total of three particle filtering half masks shall be tested: one as received, one temperature conditioned in accordance with 8.3.2 and one after the test described for mechanical strength in EN 143		Р
8.9	Breathing Resistance	100 0	
8.9.1	Test samples and fixture		
8.9.1.1	Valveless particle filtering half masks		

Report No.: AST2003205052 Page 12 of 20

EN 149:2001+A1:2009			
Clause	Requirement-Test	Result-Remark	Verdic
	A total of 9 valveless particle filtering half masks shall be tested: 3 as received, 3 after temperature conditioning in accordance with 8.3.2 and 3 after the test for simulated wearing in accordance with 8.3.1		Р
8.9.1.2	Valved particle filtering half masks		-
	A total of 12 valved particle filtering half masks shall be tested: 3 as received, 3 after temperature conditioning in accordance with 8.3.2, 3 after the test for simulated wearing in accordance with 8.3.1 and 3 after the flow conditioning in accordance with 8.3.4.		N/A
8.9.2	Exhalation resistance		-
	Seal the particle filtering half mask on the Sheffield dumny head. Measure the exhalation resistance in the opening for mouth of the dumny head using the adapter shown in Figure 6 and a breathing machine adjusted to 25 cycles/min and 2.0 listoke or a continuous flow 160 kmin. Use a suitable pressure transducer.	30L/min (Front: 0.4 mbar; Above 0.4 mbar; Below: 0.3 mbar; Left: 0.3 mbar; Right: 0.4 mbar) 95 L/min: (Front: 1.5 bar; Above: 1.5 mbar; Below: 1.4 mbar; Left: 1.4 mbar;	P
8.9.3	Inhalation resistance		-
	Test the inhalation resistance at 30 Vmin and 95 Vmin continuous flow.	165/min (Front: 3.0mbar; Above 3.0mbar; Below: 2.9 mbar; Left: 3.0mbar; Right: 3.0mbar)	Р
8.10	Clogging		-
8.10.1	Principle	The Landson	-
	The test aerosol shall be dolomite. A total of 3 particle filtering half masks shall be tested: 1 as received and 2 after temperature conditioning in accordance with 8.3.2.		Р
8.10.2	Test equipment		
7	A scheme of a typical apparatus is given in Figure 10. The working area of the test chamber has a suggested square section of 650 mm × 650 mm.		Р
8.10.3	Test conditions		
7.4	Dust: DRB 4/15 dolomite		

Report No.: AST2003205052 Page 13 of 20

	EN 149:2001+A1:2009
